Yield & Income Factors: Base Moisture = 13% Shrink = 1.3 Drying = \$0.020 Prices = \$9.00 GM0; \$9.00 non-GM0

Test Comments: With record rainfall this season, drainage ditches remained full and caused in ponding in fields. It was a problem in a portion of this test, resulting in the loss of 1 replication. In some areas, crop height varied from 16 to 24 inches in height, with no lodging. Yield levels were good but variable due to excess water. Average area soybean yields varied from a high of upper 50 to a total field loss.

Results in **bold** are significantly above test average by LSD (0.100. ns = column values not significantly different.

Test Comments: With this season, Bruce took the money he would have spent on saving corn and put it towards the bean crop. There were some pockets where water accumulated and that set beans back or made them shorter. Fungicide and insecticide were both applied twice. Plant height ranged from 24 to 33 inches. Outstanding yields at this site.

Results in **bold** are significantly above test average by LSD (0.100. ns = column values not significantly different.
